

# Steps to Check the Version or Update Google Chrome for macOS & Windows

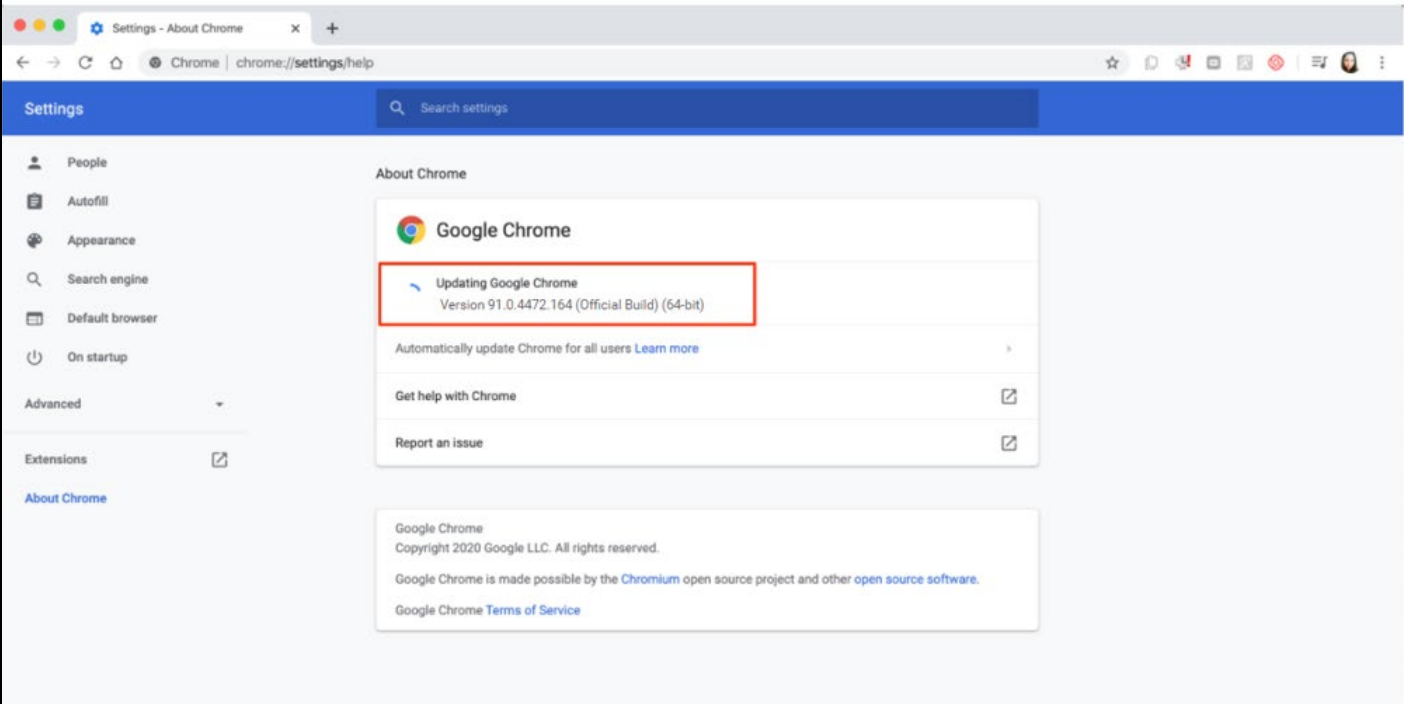

Google Chrome always checks for updates in the background when the browser is running. The minor updates are automatically installed without being noticed. However, a major upgrade needs the browser to restart. Google Chrome must be one of the latest three current versions to be compatible with Athena Telehealth.

Here are the steps on how to check the version and update Google Chrome:

1. **Launch** the [Google Chrome](#) browser on your computer system.
2. Hit on **⋮** for options and select **HELP** from the list and then select **ABOUT GOOGLE CHROME**

3. The version of Google Chrome browser will appear on the next window, toward the top of the screen.

The Google Chrome browser will automatically start checking for updates and install if any. Once the Google Chrome browser is updated, and you'll see the message “**Google Chrome is up to date**” on completing the update. The version must be within the latest three versions to work with Athena Telehealth.
