

# Steps to Check the Version or Update Microsoft Edge for Windows

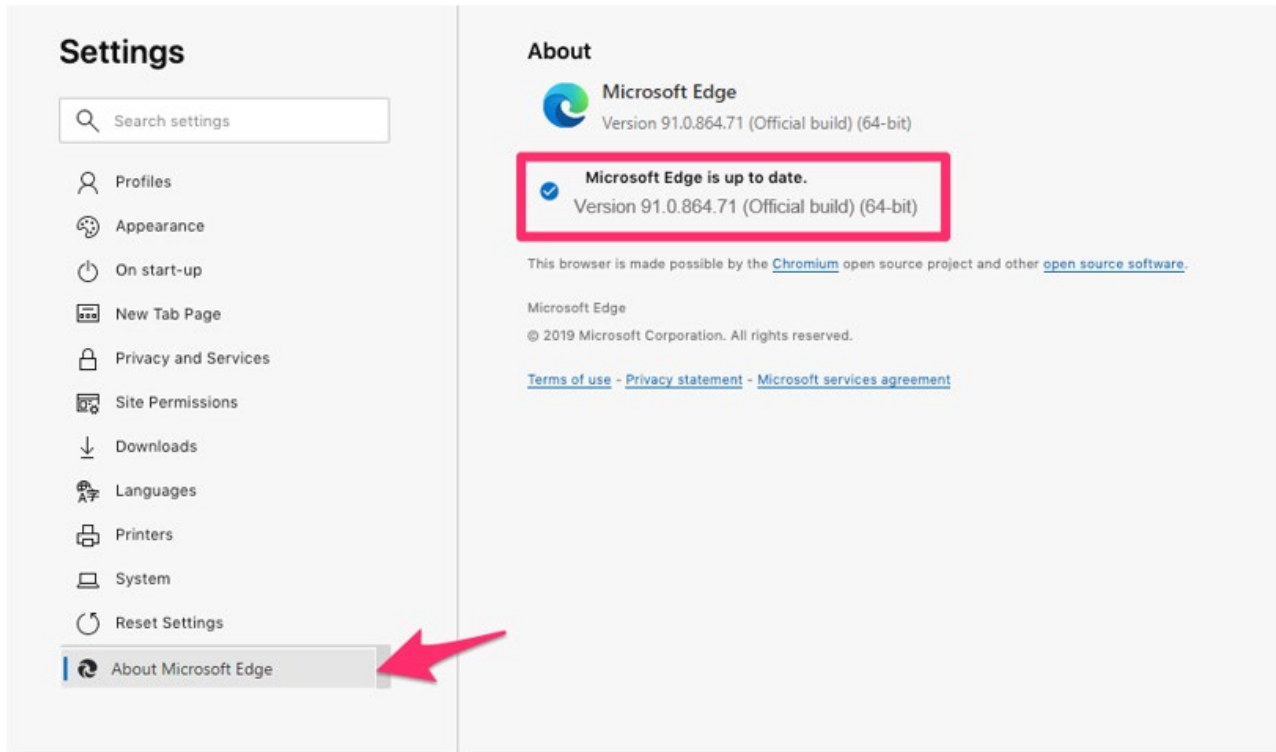

Microsoft Edge always checks for updates in the background when the browser is running. The minor updates are automatically installed without being noticed. However, a major upgrade needs the browser to restart. To be compatible with Athena Telehealth Microsoft Edge must be at version 79 or later.

**Here are the steps on how to check the version and update Microsoft Edge:**

1. **Launch** the [Microsoft Edge](#) browser on your computer system.
2. Hit on **⋮** for options and select **Settings** from the list.

3. Switch to the **About Microsoft Edge** tab.

4. The Edge browser will automatically start checking for updates and install if any

The Microsoft Edge is updated, and you'll see the message “**Microsoft Edge is up to date**” on completing the update. The version number will be displayed as seen above. The first two numbers of the version number should be 79 or higher to work with Athena Telehealth.
