

Steps to Update or Check Version of Safari for macOS

The Safari browser must be version 12.0 or higher to be compatible with Athena Telehealth.

Here are the steps on how to check or update Safari:

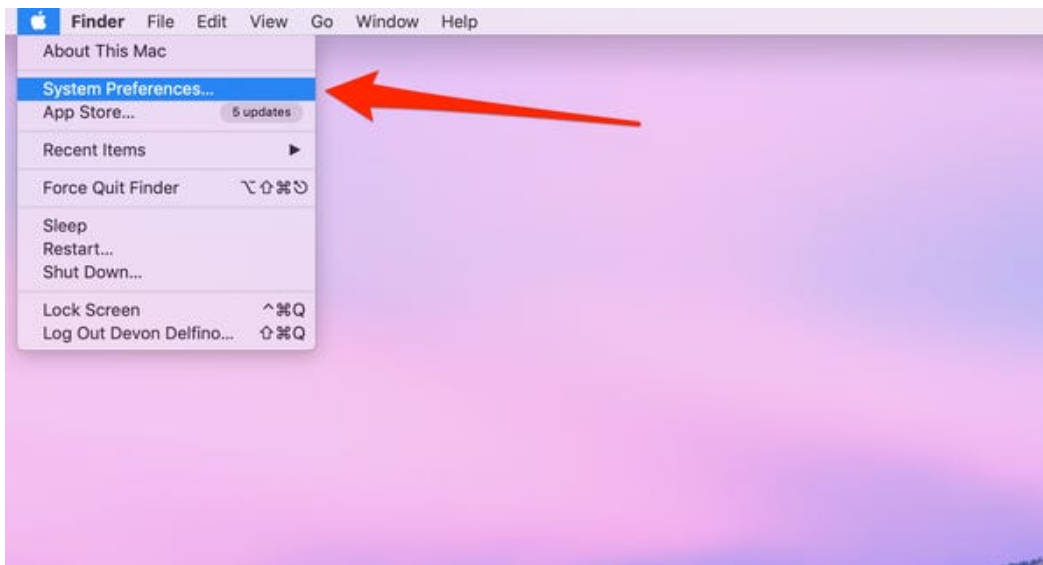

1. **Launch** the [Safari](#) browser on your computer system.
2. With your Safari browser open click on the tab at the top named Safari and then under the options that appear click **ABOUT SAFARI**.

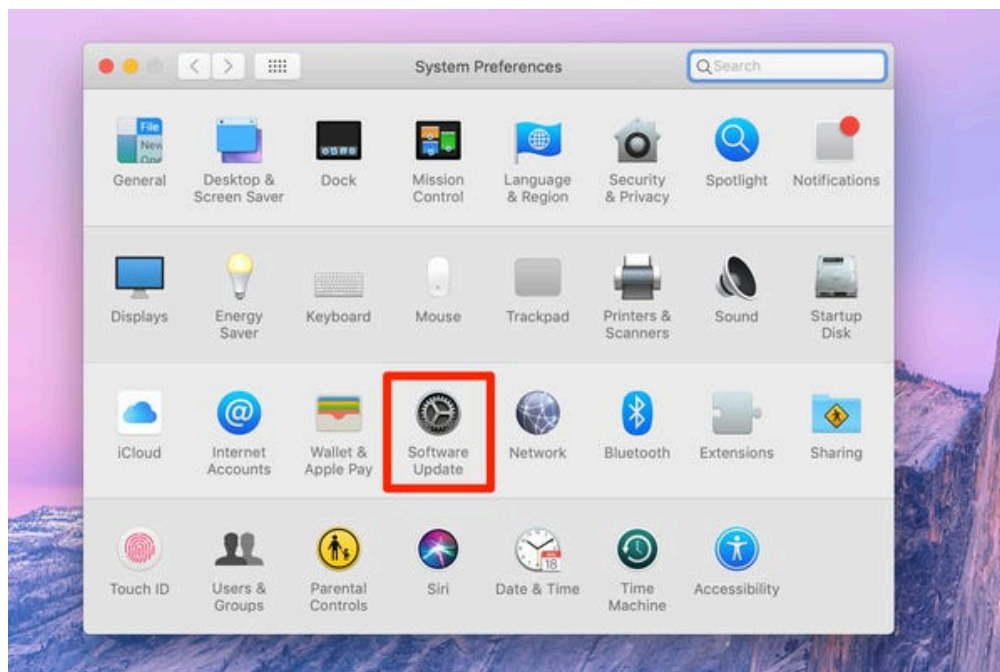

3. A new window will open with the Safari version number. The First number located before the number written under the parenthesis is your current version of Safari browser.

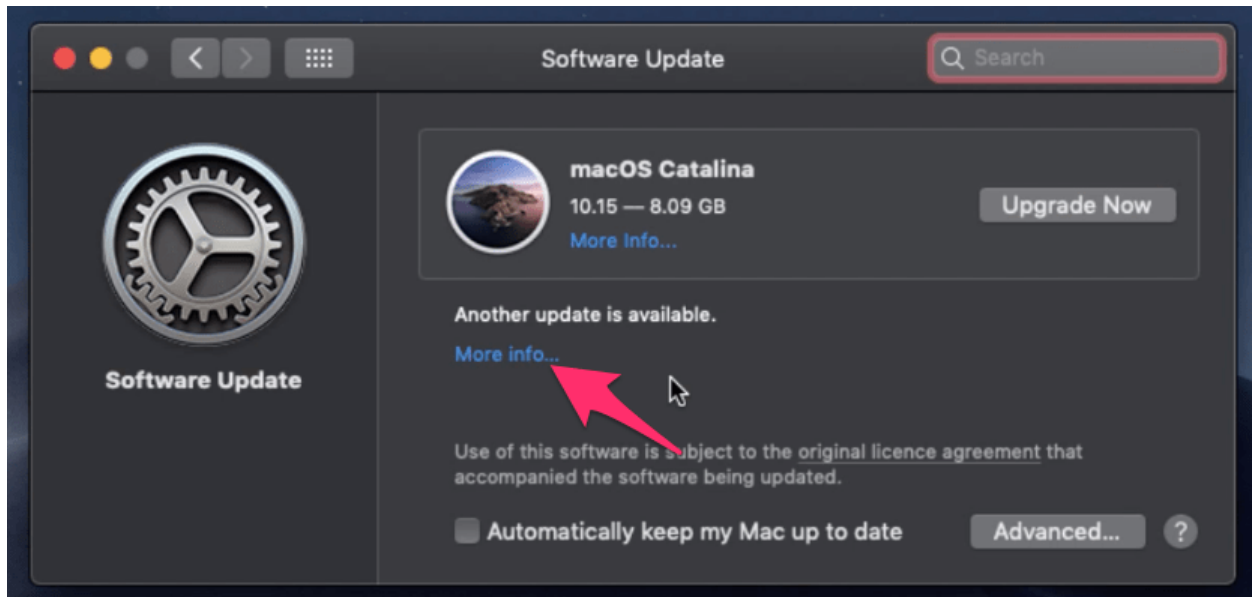

4. To update the safari version, click the apple logo and select **SYSTEM PREFERENCES**

5. Select **SOFTWARE UPDATE** marked with a gear icon.

6. Your computer will then check if there are any updates or upgrades available for your Mac. Click on the **MORE INFO...** link.

7. Select the checkbox next to the Safari browser to install updates and click the **INSTALL NOW** command button. The download will begin, and Safari update installation will finish automatically.
