

# Steps to Update or Check Version of Safari on iPhone Device

The Safari browser on an iPhone must be at version 12.0 or higher.

Here are the steps on how to check or update Safari on an iPhone device:

1. **Launch** the **SETTINGS** app on your iPhone device.
2. Navigate to the **GENERAL** tab within settings. Tap on the **ABOUT** tab to open OS information. The number you see at **SOFTWARE VERSION** is the current iOS & Safari version. This number must be at 12.0.0 or higher to be compatible with Athena Telehealth.

\*\*\*Note: There is not a way to upgrade just the Safari browser on an iPhone. The Safari browser comes as an iOS package install. To upgrade Safari, you must upgrade the entire software. If your software version needs to be updated proceed with the following steps.

3. Again, launch the **SETTINGS** app on your iPhone. Go to the **GENERAL** tab and click **SOFTWARE UPDATE**. Click the **DOWNLOAD AND INSTALL** option. Agree to the terms and conditions to start the update.
