

YFP Athena Telehealth Video Settings

Once the nurse joins the virtual visit you will see them appear on your screen as displayed here.

You have the option to mute your microphone if needed at any time during the online visit by clicking the "Mute" icon as shown here or you can flip your camera around to the opposite direction if needed by clicking the "Flip" icon

To leave the online visit click the "Leave" icon. However, do not click this until after your visit with the provider is complete.

The "Settings" icon gives you additional settings to test your microphone or to change the default microphone (headset or phone). There is also an option to flip your camera from front to back.

The "More Options" icon gives you an option to copy the online visit link and email or text it to a family member, care giver, or friend if you would like them to join the call. Within "More Options" there is also a choice to stop the video, report an issue, or for a list of help topics.
